Professional Summary

Senior Software Engineer & Gameplay Programmer with 16+ years of experience building high-performance games and enterprise systems. Successfully shipped mobile titles with **Homa Games** (thousands of downloads), contributed to multiplayer VR simulations in **Spain (Made in Verse)**, and developed end-to-end automation software adopted by multiple factories. Open to remote opportunities and international relocation.

Expert in Unity (C#), Unreal Engine (C++), multiplayer replication, performance optimization and .NET enterprise automation.

Professional Experience

Game Developer & Technical Lead | 2024 – Present | Bahman Studio | Arak, Iran

- Led a game development team delivering multiple mobile titles with optimized performance, clean architecture, and fast iteration cycles.
- Collaborated with Homa Games on several hyper-casual titles, contributing to gameplay systems, rapid prototyping, performance optimization and live updates.
- Created and launched the first AR interior design application in Iran (Unity AR Foundation), enabling real-time furniture placement and visualization in users' actual environments.
- Designed and developed a comprehensive BPMS (Business Process Management System) using C# .NET Framework + MySQL, fully automating factory and office workflows (production, inventory, HR, payroll, approvals, reporting), eliminating paper processes and achieving high user satisfaction across multiple companies. reduced manual tasks by 70–90% in production environments.

- Recognized as a nationally certified "Creative Company" (competitive government-backed designation).

Unreal Engine Programmer & Mentor | 2023 | Made in Verse | Málaga, Spain

- Contributed to multiplayer VR simulation projects as part of an international team, focusing on high-performance real-time systems.
- Implemented replication systems for both Listen and Dedicated servers, ensuring smooth multiplayer synchronization and low-latency interactions.
- Developed custom C++ components, gameplay logic, and automation tests within Unreal Engine.
- Created smart vehicle production prototypes for Huawei (simulation & interaction layer).
- Delivered hands-on Unreal Engine training to team members, covering C++/Blueprint workflows, replication best practices, VR optimization, and multiplayer architecture.
- Worked across the full software development cycle: design, implementation, debugging, and optimization of C++ codebase for VR experiences.

Software Developer & Full-Stack Engineer | 2009 – 2023 | Tehran, Iran

- Founded and developed “Zabanews”, recognized as one of the top educational applications in the Iranian market — a gamified English learning platform with high user retention and strong ratings.
- Created and launched more than 100 advanced-feature websites for various clients, delivering responsive, high-performance web solutions using PHP, JavaScript, HTML/CSS, and MySQL.
- Built and published an Android mobile application that achieved a 4.5-star rating in Iranian app markets, with over 500K downloads — demonstrating strong mobile development and user-focused design.
- Served as Full-Stack Developer at MMH Company for 7 years, leading development of enterprise-level web and backend systems, including database architecture, API integrations, and scalable user interfaces.

Education & Certifications

- **Master of Business Administration (MBA)**

  Allameh Tabataba'i University – Tehran, Iran

  Focus: Strategic management, digital business, and technology leadership
- **Associate Degree in Computer Engineering – Software**

  Azad University, Arak Branch – Arak, Iran

  Core coursework: Programming fundamentals, software engineering, algorithms, databases
- **Professional Certifications**

  Advanced C++ Programming, Technical and Vocational Training Organization (TVTO), Iran

  Python Programming & Development, Technical and Vocational Training Organization (TVTO), Iran

---

Technical Skills

Languages: C#, C++, JavaScript, PHP

Game Engines: Unity, Unreal Engine

Multiplayer: Replication, Netcode, Client-Server Architecture, Dedicated Servers

Performance: Profiling, Optimization, Memory Management

Backend: .NET, REST APIs, MySQL

XR: AR Foundation, VR Development

Tools: Git, Agile, CI/CD
